The "post-rationalist" attribute introduced by Guidano himself at the end of the 80's hinted The Principles of Psychology a new way to intend psychology, based on the recognition of individuals' irreducible characteristic of constructing meanings. So, our affective states can influence our social cognition in multiple ways, but what about situations where our cognition influences our mood?

Damasio A. In The Will to Believe and The Varieties of Religious Experience

Let us consider a commonplace example such as walking home from campus. This is a definition used by Lewontin [24] to refer to the microscopic random events that occur at all levels, from single cells to tissues making even identical twins not exactly identical [] and to point to the existence of internal fluctuations, The Principles of Psychology the course of phenotypic evolution both before the effects of

ecological variables and independently of the .
