Advances in Physiology Education. Spanswick, W.

ChloridetransportinChara:I. Textbook: Berg, H. In this way, the substrate L -arginine is oxidized to L -citrulline and NO. However, an increase in vasopressin levels can also be found in aged people, where it induces water retention and hyponatremia and stimulates calcium release from bone, thus contributing to osteoporosis, as well as affecting the cardiovascular system and blood pressure, thus contributing to the development of hypertension. Schulten, and E. Bronner A. This finding elucidates the signaling mechanism of extracellular H₂O₂ in colonic epithelium and suggests the implication of AQP3-mediated H₂O₂ transport in innate immune responses at mucosal surfaces [68].
